DETAILED ACTION

The application of Chikao Nagasaka for Device Controller filed December 07, 2001 has been examined. Claims 1-6 are pending.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Nojiri et al. U.S Patent 4503528.

Regarding claim 1, Nojiri et al. teaches a device controller (figure 1), comprising: an operation section (2) which can send an operation signal to a device (col. 4 lines 1-6); and a controlling section (3) for actuating a function that the device has for achieving an original object to thereby change a physical state of changing the volume (physical state as described on page 4 lines 12-20 of the specification) of the device to a state that is different from the present state of the device (col. 4 line 65-col. 5 line 2). Nojiri et al. further teaches notifying, at a point in time at which the device becomes able to receive the operation signal from the operation section by setting the flags corresponding to the device to be controlled (col. 6 lines 24-37).

Regarding claim 2, Nojiri et al. teaches a device controller (figure 1), comprising: an operation section (2) which can send an operation signal to a device (col. 4 lines 1-6); and a controlling section (3) for changing a physical state of the device to a state that is different from

Art Unit: 2635

the present state of the device such as changing the volume of an audio system (col. 4 line 65-col. 5 line 2). The change of state of the device is achieved by activating a function as shown in figure 4. at a point in time at which the controlling section becomes able to receive the operation signal from the operation section. Nojiri et al. further teaches the use of flags (504, 505, 506) to indicate when an instruction set is to be executed (col. 8 lines 4-20) and inherently indicate the control section is ready to receive operation signal.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nojiri et al. U.S Patent 4503528 in view of Onodera U.S Patent 6448670.

Regarding claims 4-6, Nojiri et al. teaches a device controller (figure 1), comprising: an operation section (2) which can send an operation signal to a device (col. 4 lines 1-6); and a controlling section (3) for actuating a function but is silent on teaching the operation section is displaceable within a predetermined range in a vehicle compartment. Onodera in an art related vehicle mounted device control unit teaches the operation section (col. 6 lines 21-24) includes an operation section main body (4) that is displaceable within a predetermined range in a vehicle

Art Unit: 2635

compartment (figure 1) and detecting sections (31), with each detecting section being connected to the controlling section (34) and detecting the operation section main body at different positions within the predetermined range (col. 6 line 62-col. 7 line 4).

It would have been obvious to one of ordinary skill in the art for the operation section is displaceable within a predetermined range in a vehicle compartment and the detecting section being connected to the controlling section and detecting the operation section main body at different positions within the predetermined range in Nojiri et al. as evidenced by Onodera because Nojiri et al. suggests a device controller comprising an operation section which sends an operation signal to a device and Onodera teaches the operation section includes an operation section main body that is displaceable within a predetermined range in a vehicle compartment and detecting sections, with each detecting section being connected to the controlling section and detecting the operation section main body at different positions within the predetermined range.

Allowable Subject Matter

Claim 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Regarding claim 3, the prior art fail to teach or suggests that after the part is displaced in the predetermined amount, the controlling section drives the driving section to displace the driven part in a opposite direction.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vernal U Brown whose telephone number is 703-305-3864. The examiner can normally be reached on M-Th, 8:30 AM-6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Horabik can be reached on 703-305-4704. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9314.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4750.
